TECH EXPLORERS

Scan to open the games

Quick access for learners. No sign-in and no typing of the address.

hansafumoonga.github.io/computer_club

1. Make sure the camera is not blocked

- Open any **cover or sliding privacy shutter** over the camera lens.
- The camera light should switch on. If the picture is **black**, the camera is covered or blocked.
- Windows: **Settings, Privacy and security, Camera**. Turn on **Camera access** and **Let apps access your camera**.
- Close other programs that may be using the camera (video calls, for example).

2. Open the camera and choose QR scan

1. Open the **Camera** app (Windows: Start menu, Camera. Chromebook: Launcher, Camera).
2. Switch it to the **QR code / Barcode** scan mode (Windows: the **Barcode** mode. Chromebook: **Scan**, then **QR code**). The camera must be on this mode, not Photo or Video.
3. No QR or Barcode mode on your computer? Scan with a phone camera, or type the address above.

3. Hold the code in front of the camera

- Hold the page **flat and steady**, about **20 to 30 cm** from the camera, so the whole square (with its white border) fills the picture.
- Use **good light** and avoid glare or shadows across the code. Keep the page straight, not tilted.
- Wait a moment. A **link** appears on the screen. Click it to open **Tech Explorers**.
- Showing the code on a screen instead of paper? Turn the **brightness up** and keep it still.

Good to know

- Print this page at **100% size** (not shrunk). Keep the code **black on white** and do not cut off its white border.
- Tech Explorers is made for a **desktop or laptop computer with a keyboard and mouse** (a Makey Makey works too). Phones and tablets may not work as expected.

Tech Explorers is a free educational resource. Made by Moonga Hansafu, with AI help and a safety-first approach.
